

.NET Agent Release Notes

Exported on 10/02/2024

Version 24.9.0 - October 2, 2024

Enhancements

The .NET Agent now supports ARM64 processor architectures on Linux. See [.NET Supported Environments](#).

Resolved Issues

Key	Summary	Severity Level	Affected Version(s)
DOTNET-7271	The Unified Agent on Linux generates warnings that it cannot identify the IIS Web Server.	Medium	>= 21.3.0
DOTNET-7292	Linux applications crash when object instance tracking is enabled.	High	24.7.0
DOTNET-7344	On the Secure Application > Applications page, the following columns report incorrect values: <ul style="list-style-type: none"> • Enabled Nodes • Secured Nodes • Security Status 	Medium	< 24.9.0
DOTNET-7353	The app agent incorrectly reports average response times for business transactions.	Medium	>= 23.6.0

Version 24.7.0 - July 26, 2024

Enhancements

- You can now request .NET agent log files using the Controller UI. See [Request Agent Log Files](#).
- You can now disable Secure App services for the .NET agent using the Controller UI. To do so, [add](#) the [disable-dynamic-services](#) node property.
- The default user in the `appdynamics/dotnet-core-agent` container image was changed to the non-root user.
- Transaction context handling during ASP.NET asynchronous instrumentation was improved.
- Third-party dependencies were updated.

Resolved Issues

Key	Summary	Severity Level	Affected Version(s)
DOTNET-7265	End user monitoring cookies are not excluded from business transaction correlation, even when the <code>request exclude</code> rule is configured to exclude these cookies.	Low	23.4
